

The Art of Clinic Design

“The Architecture can speak for you”

The design of your clinic plays an important role and if done right, it can speak for itself. How do we accomplish this? As a company, we highlight the non-verbal language of architecture, expressing itself through form, spaces, color, materials and art. With these tools, we can awaken the senses and project a work of excellence.

El diseño de su clínica desempeña un papel importante y, si se hace bien, puede hablar por sí mismo. ¿Cómo lo conseguimos? Como empresa, destacamos el lenguaje no verbal de la arquitectura, que se expresa a través de la forma, los espacios, el color, los materiales y el arte. Con estas herramientas, podemos despertar los sentidos y proyectar una obra de excelencia.

Your clinic is a reflection of your own image.

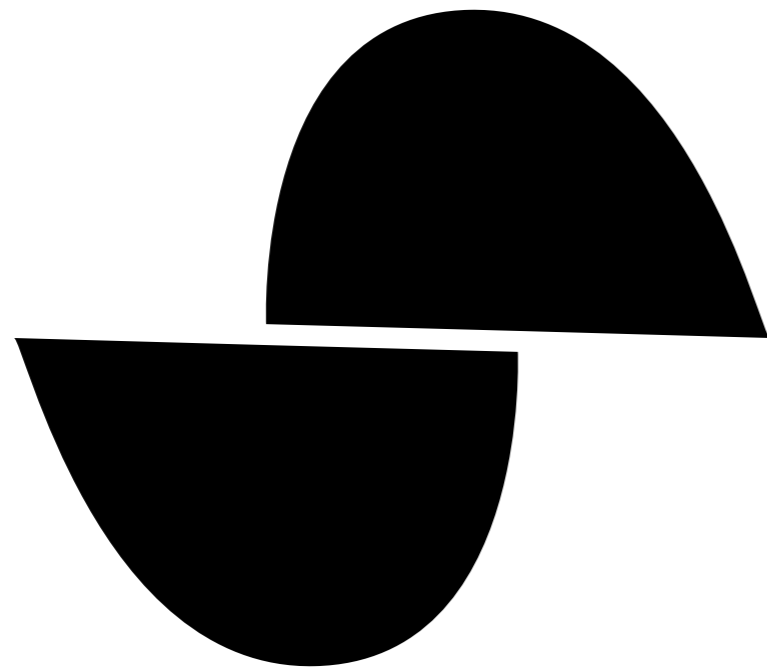

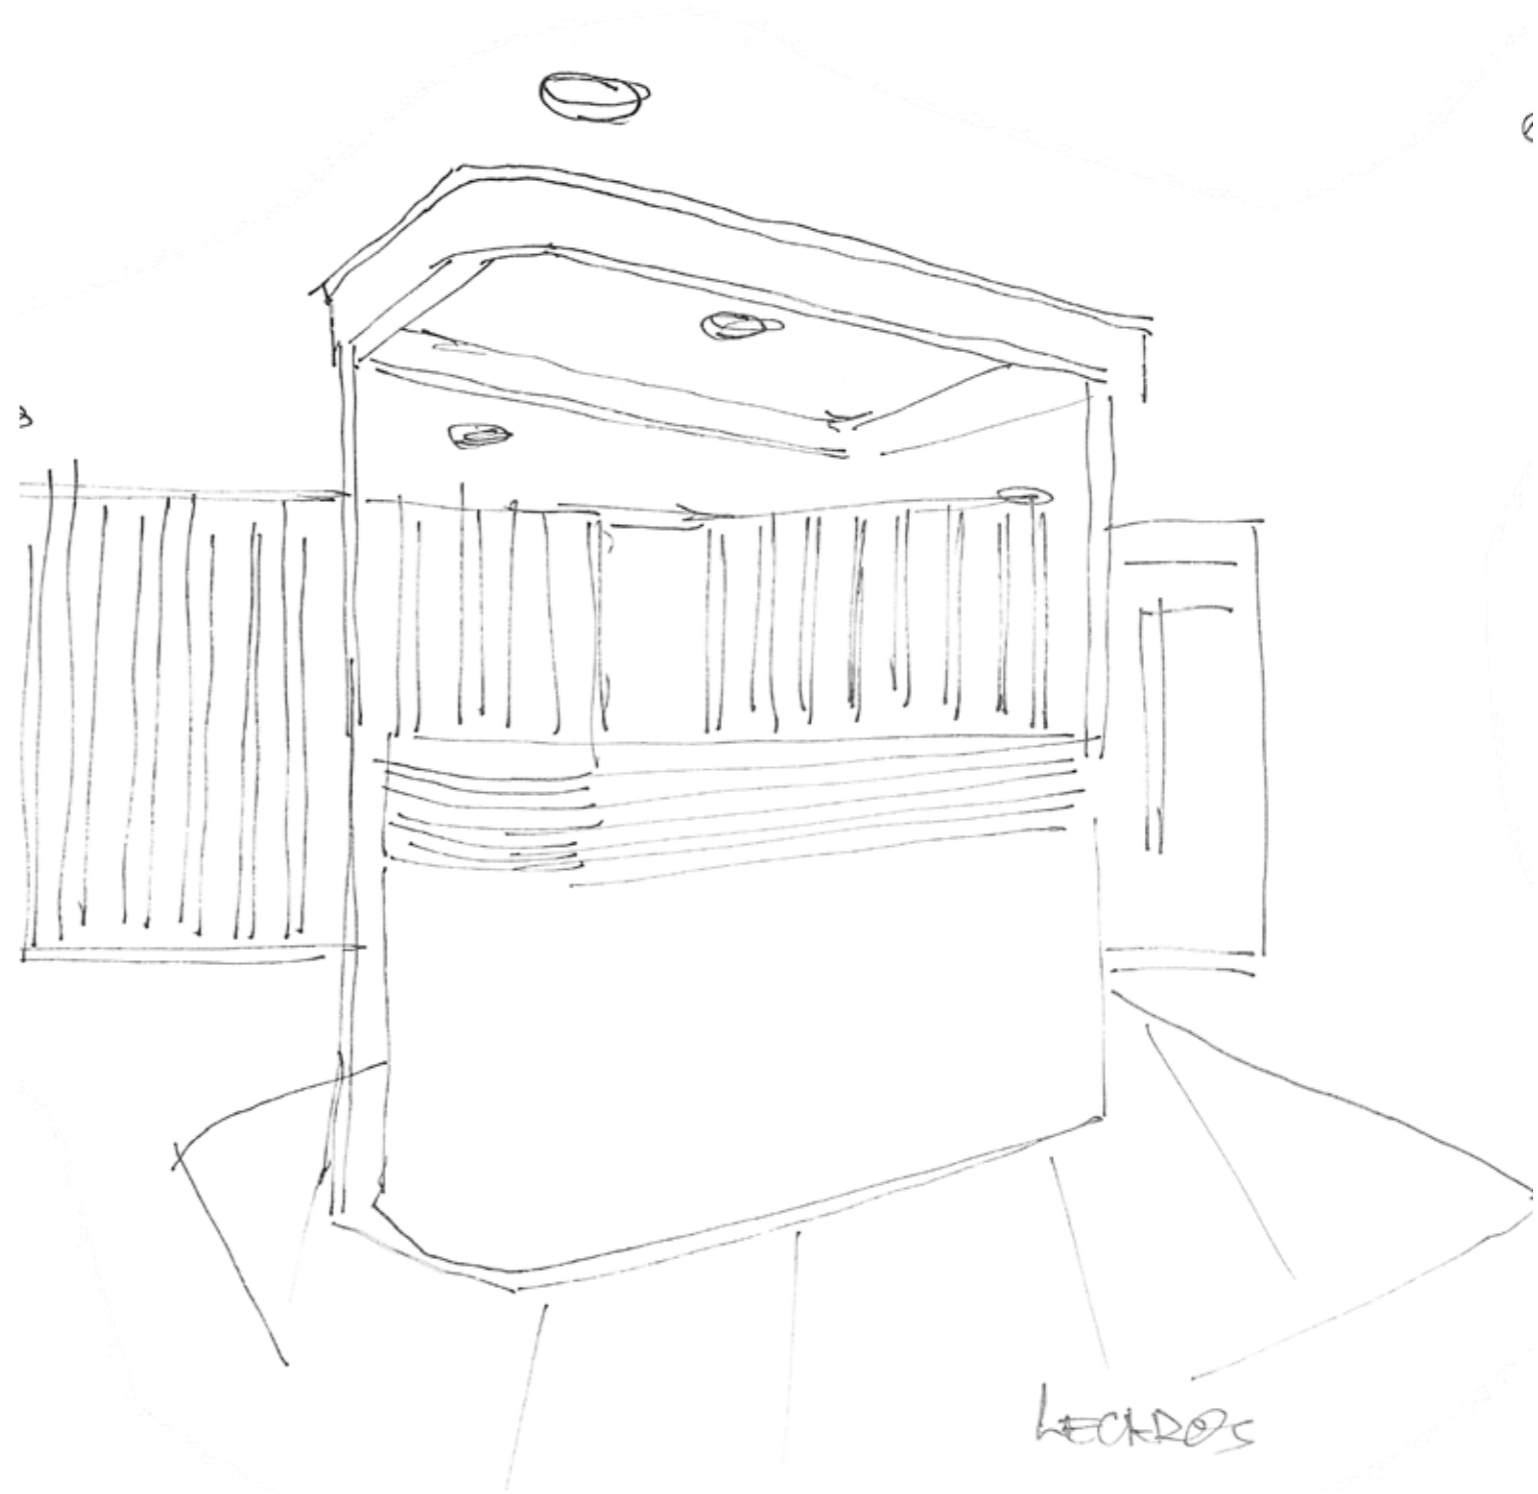

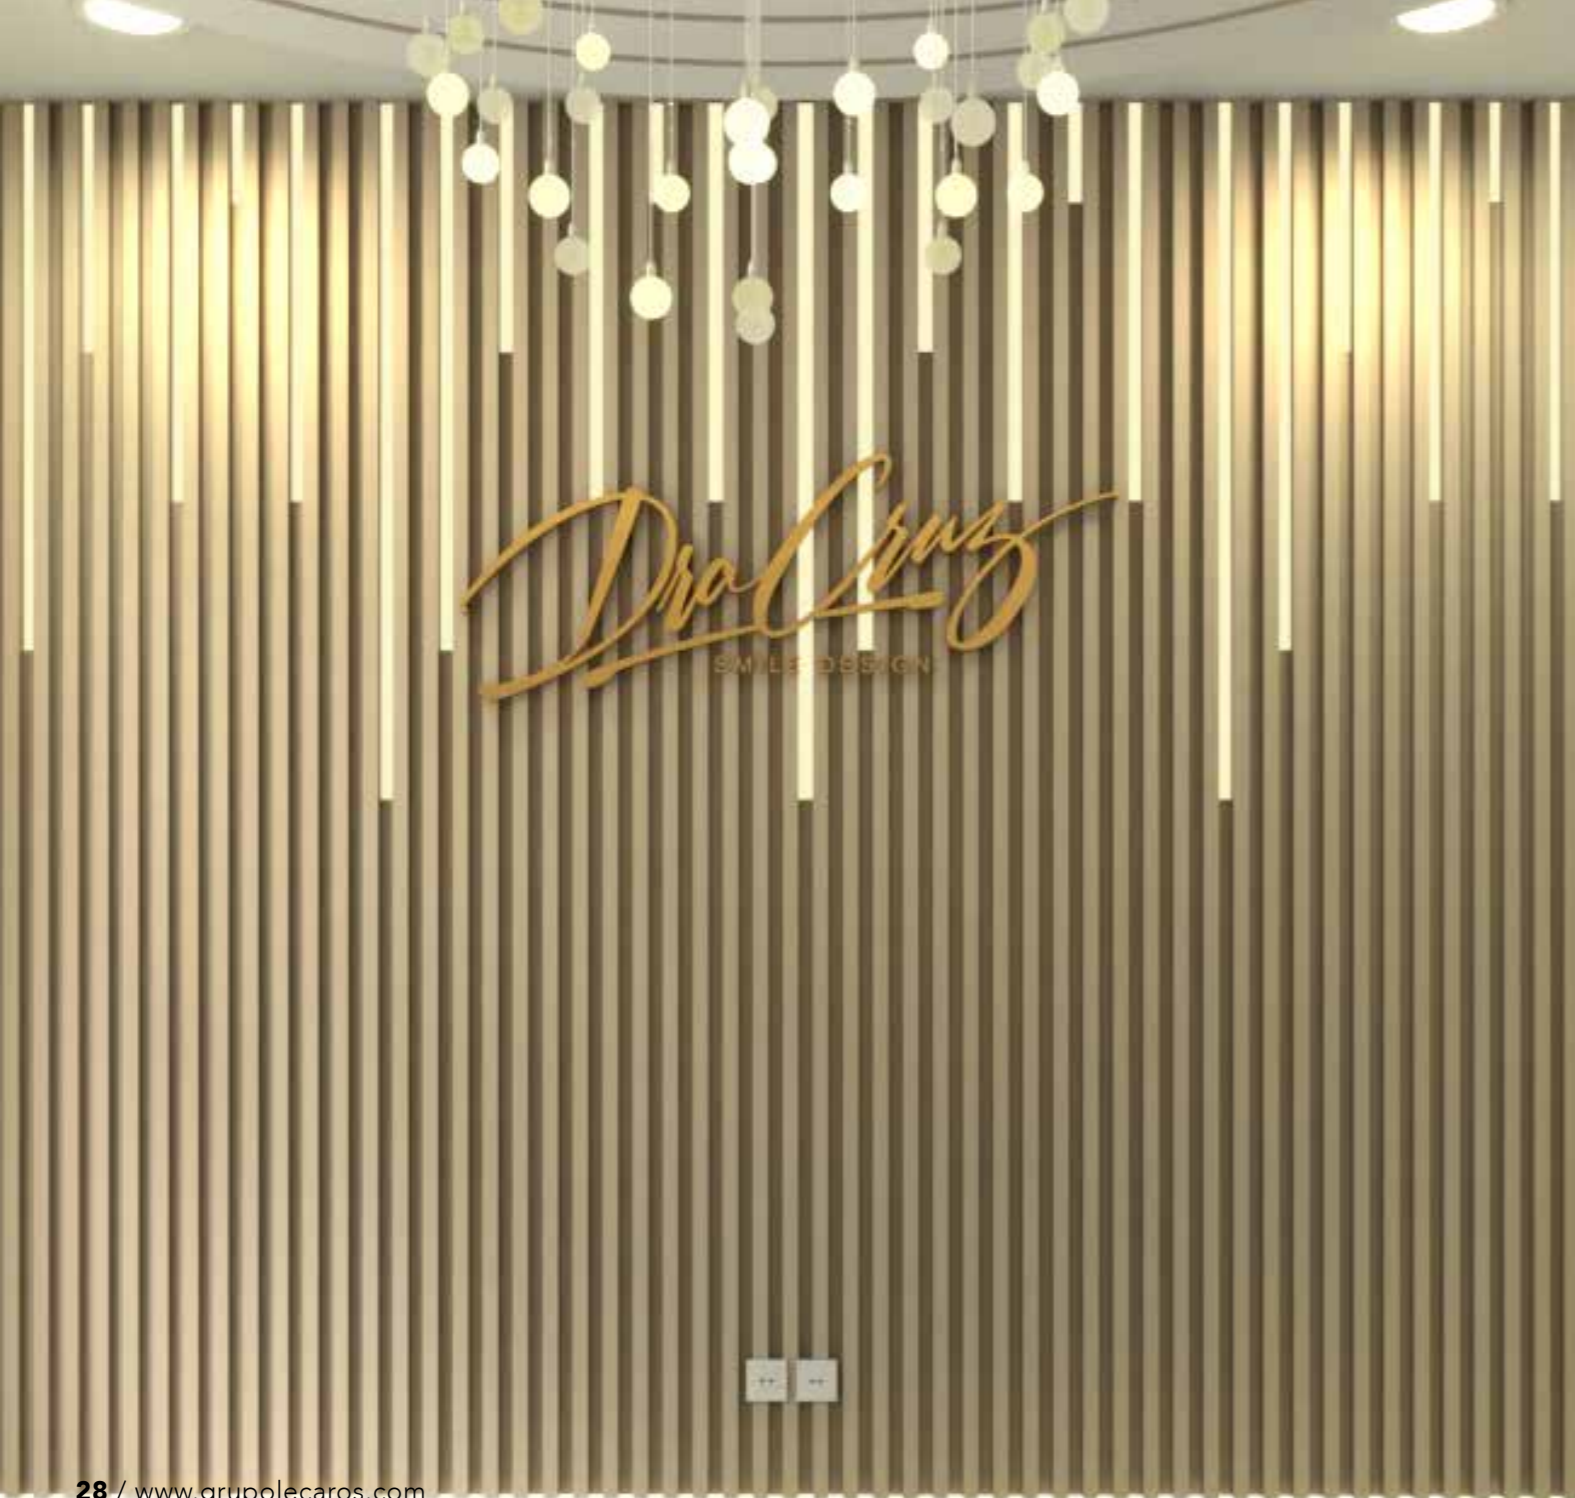

When you have a large space to conquer, the curve is the solution.

Expression through form, space, color and materiality.

People believe that the correct way to make buildings is a right angle because it makes better use of space, but it is like saying that a landscape is a waste of space. The world is not a right angle.

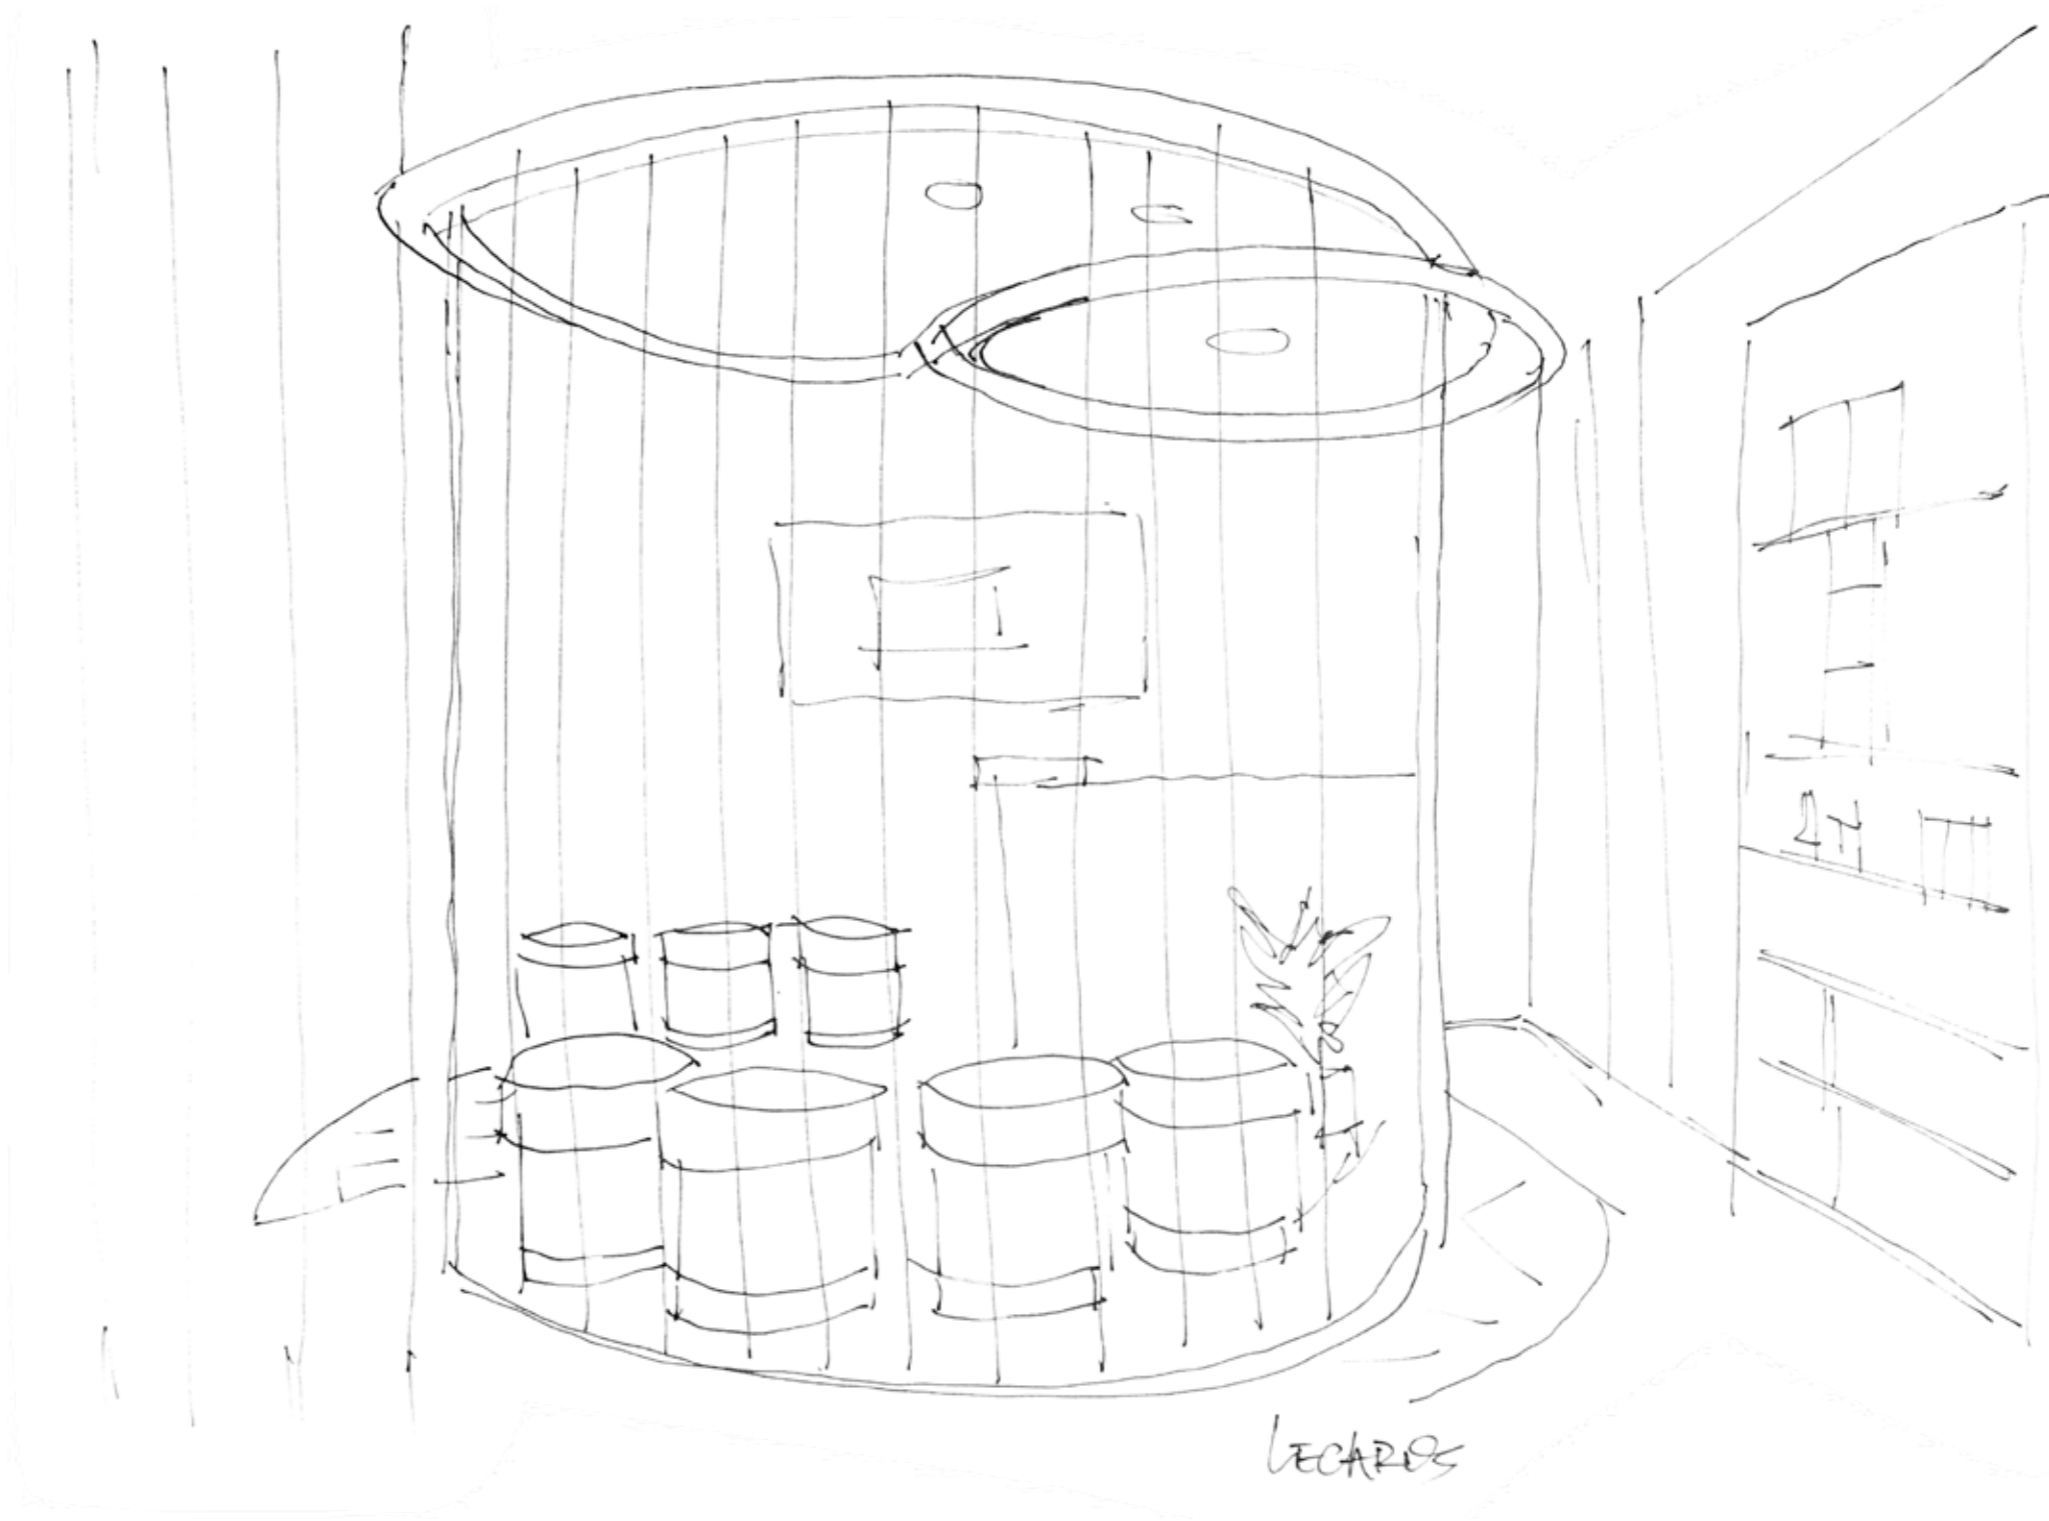

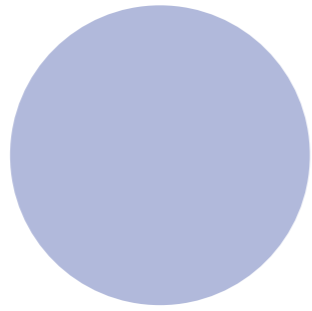

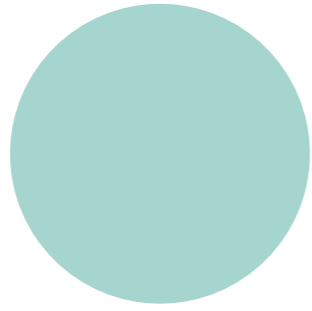

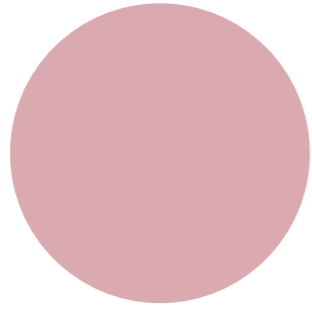

Passion for Clinic Design.

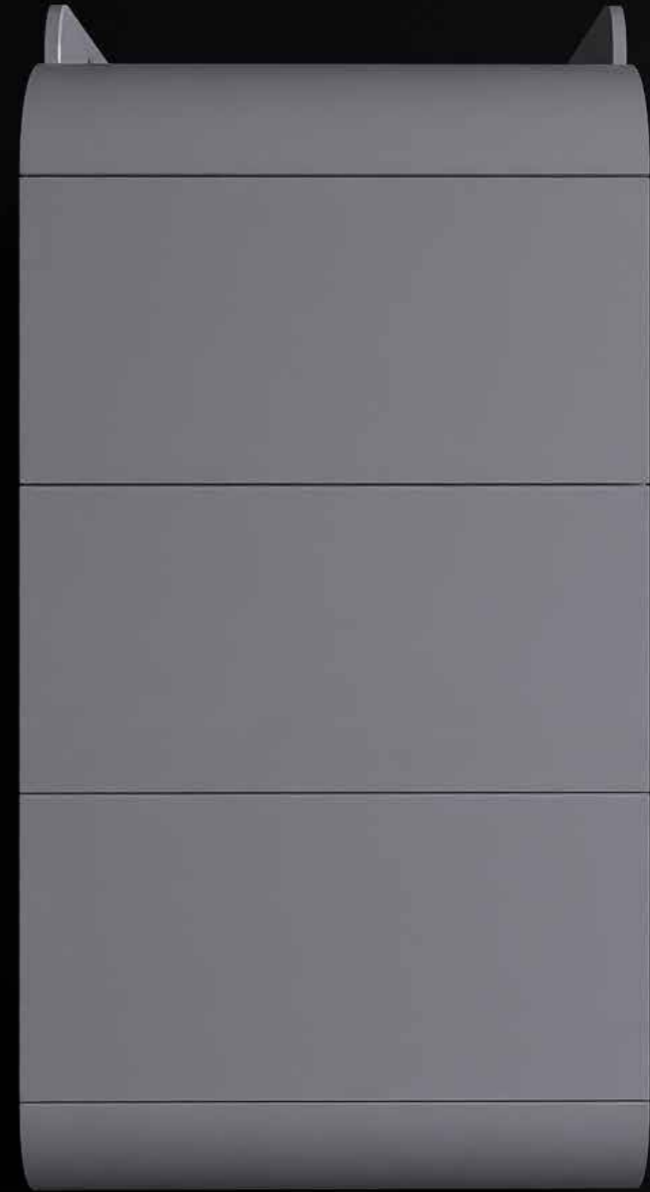

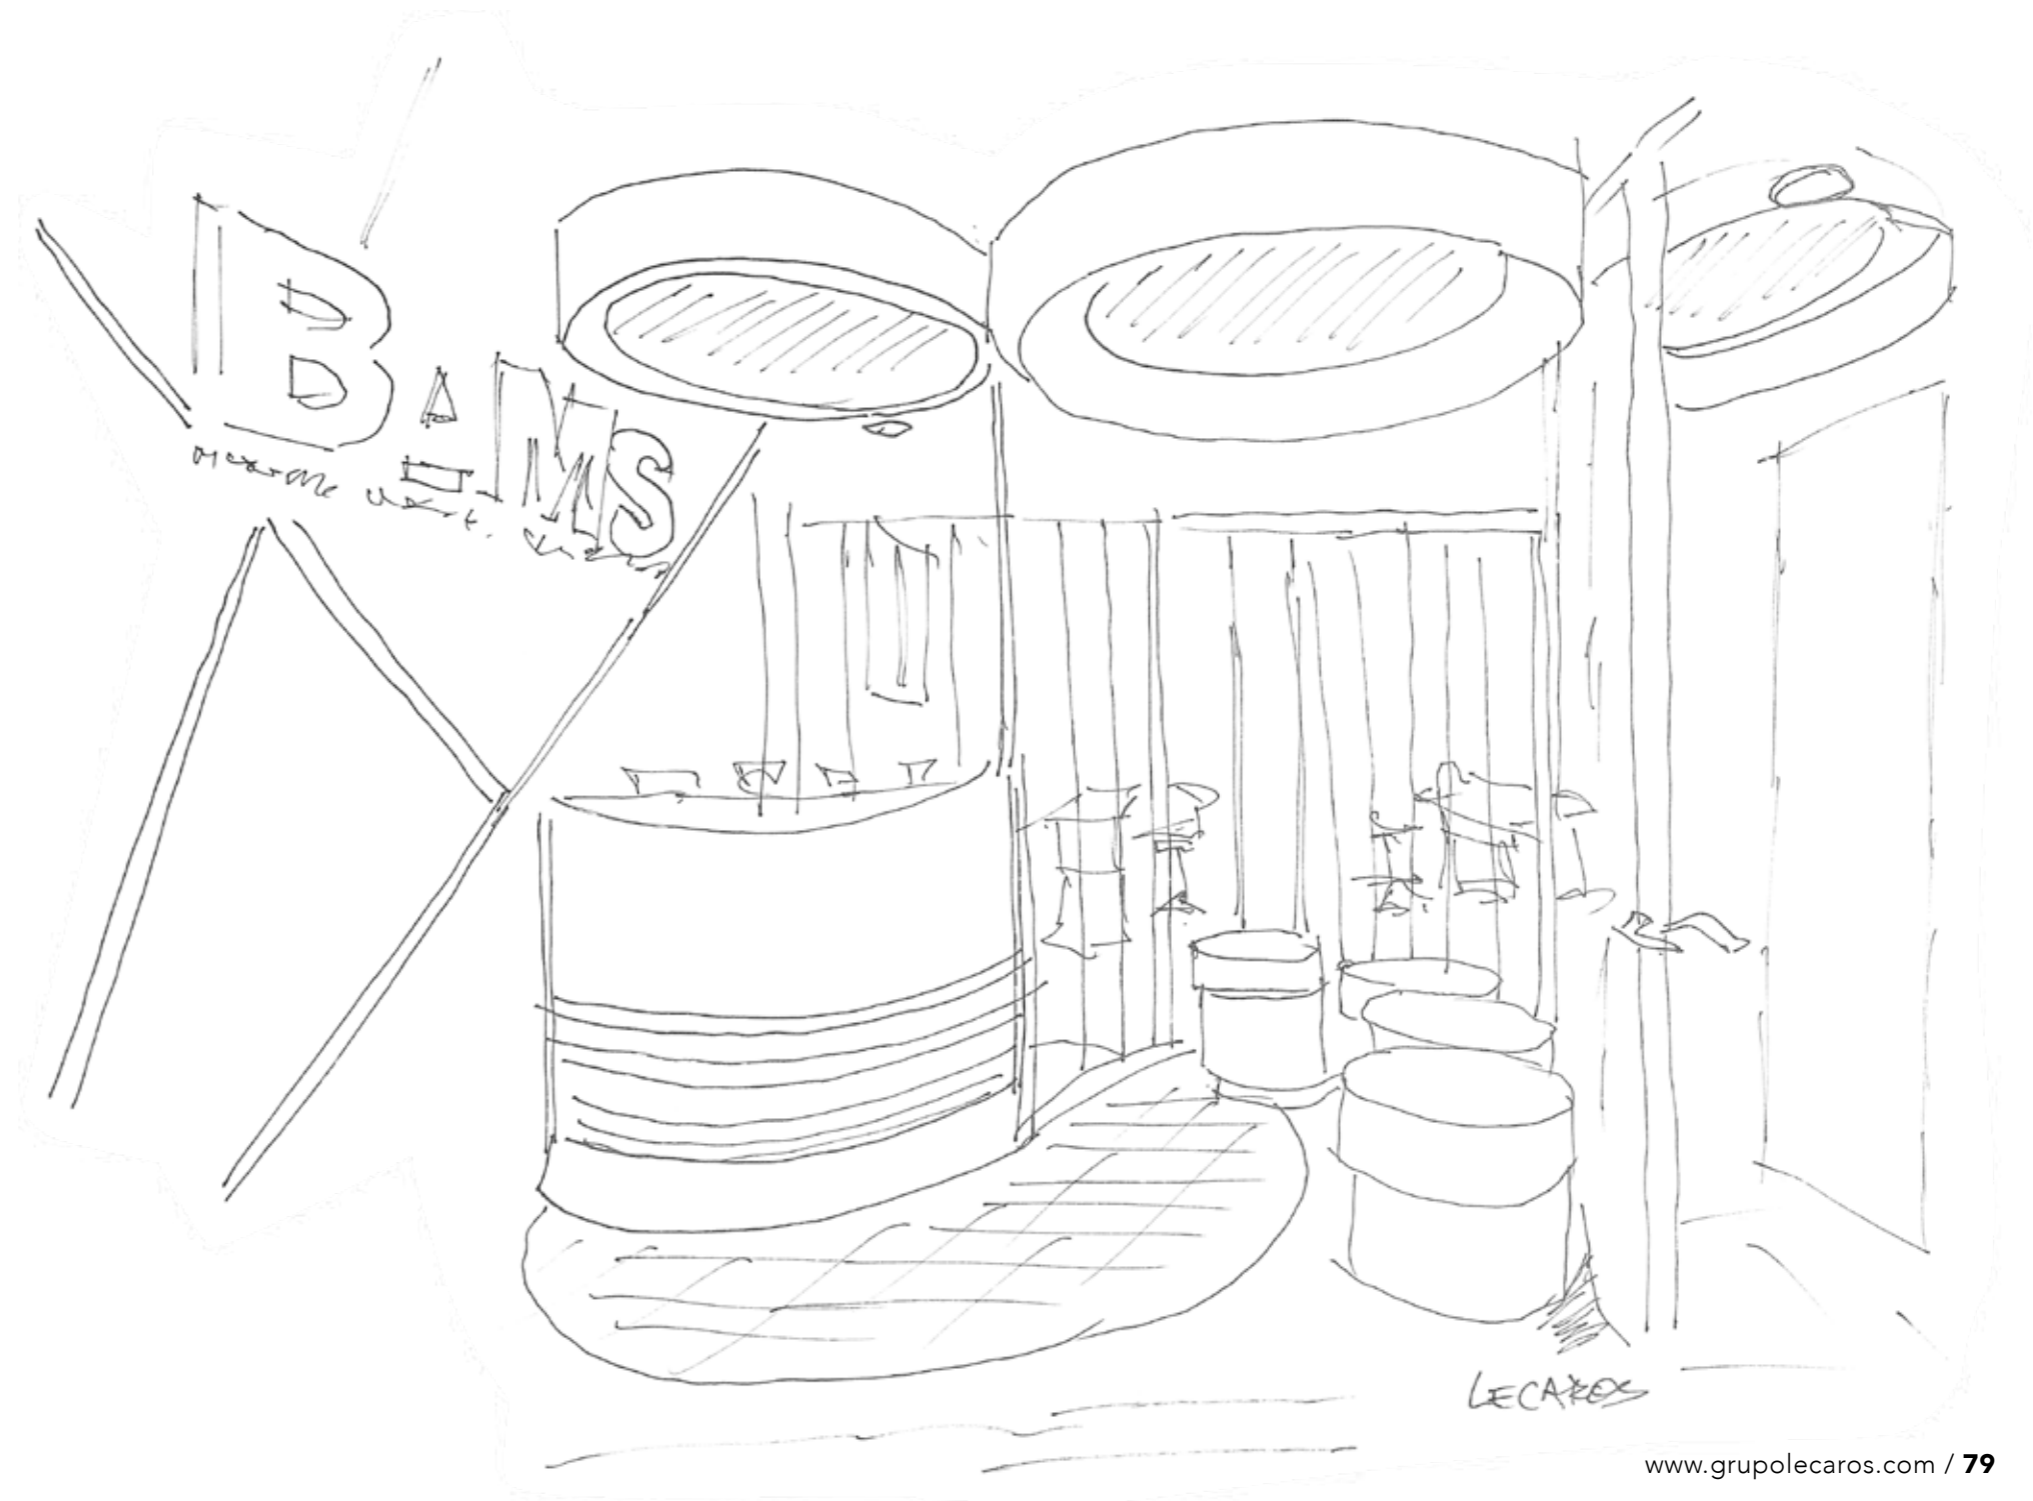

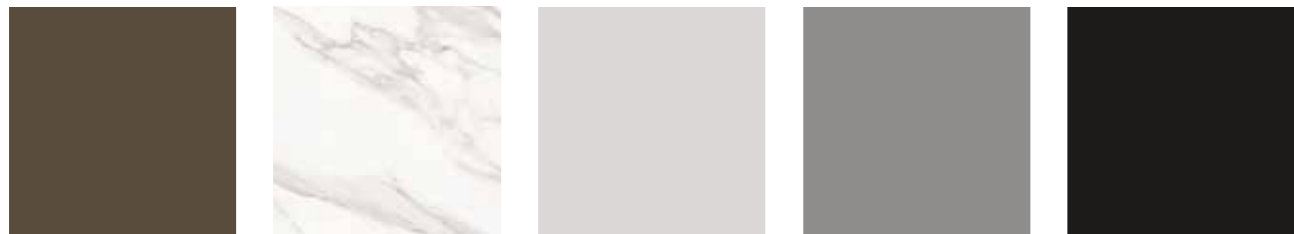

Architecture speaks for itself.

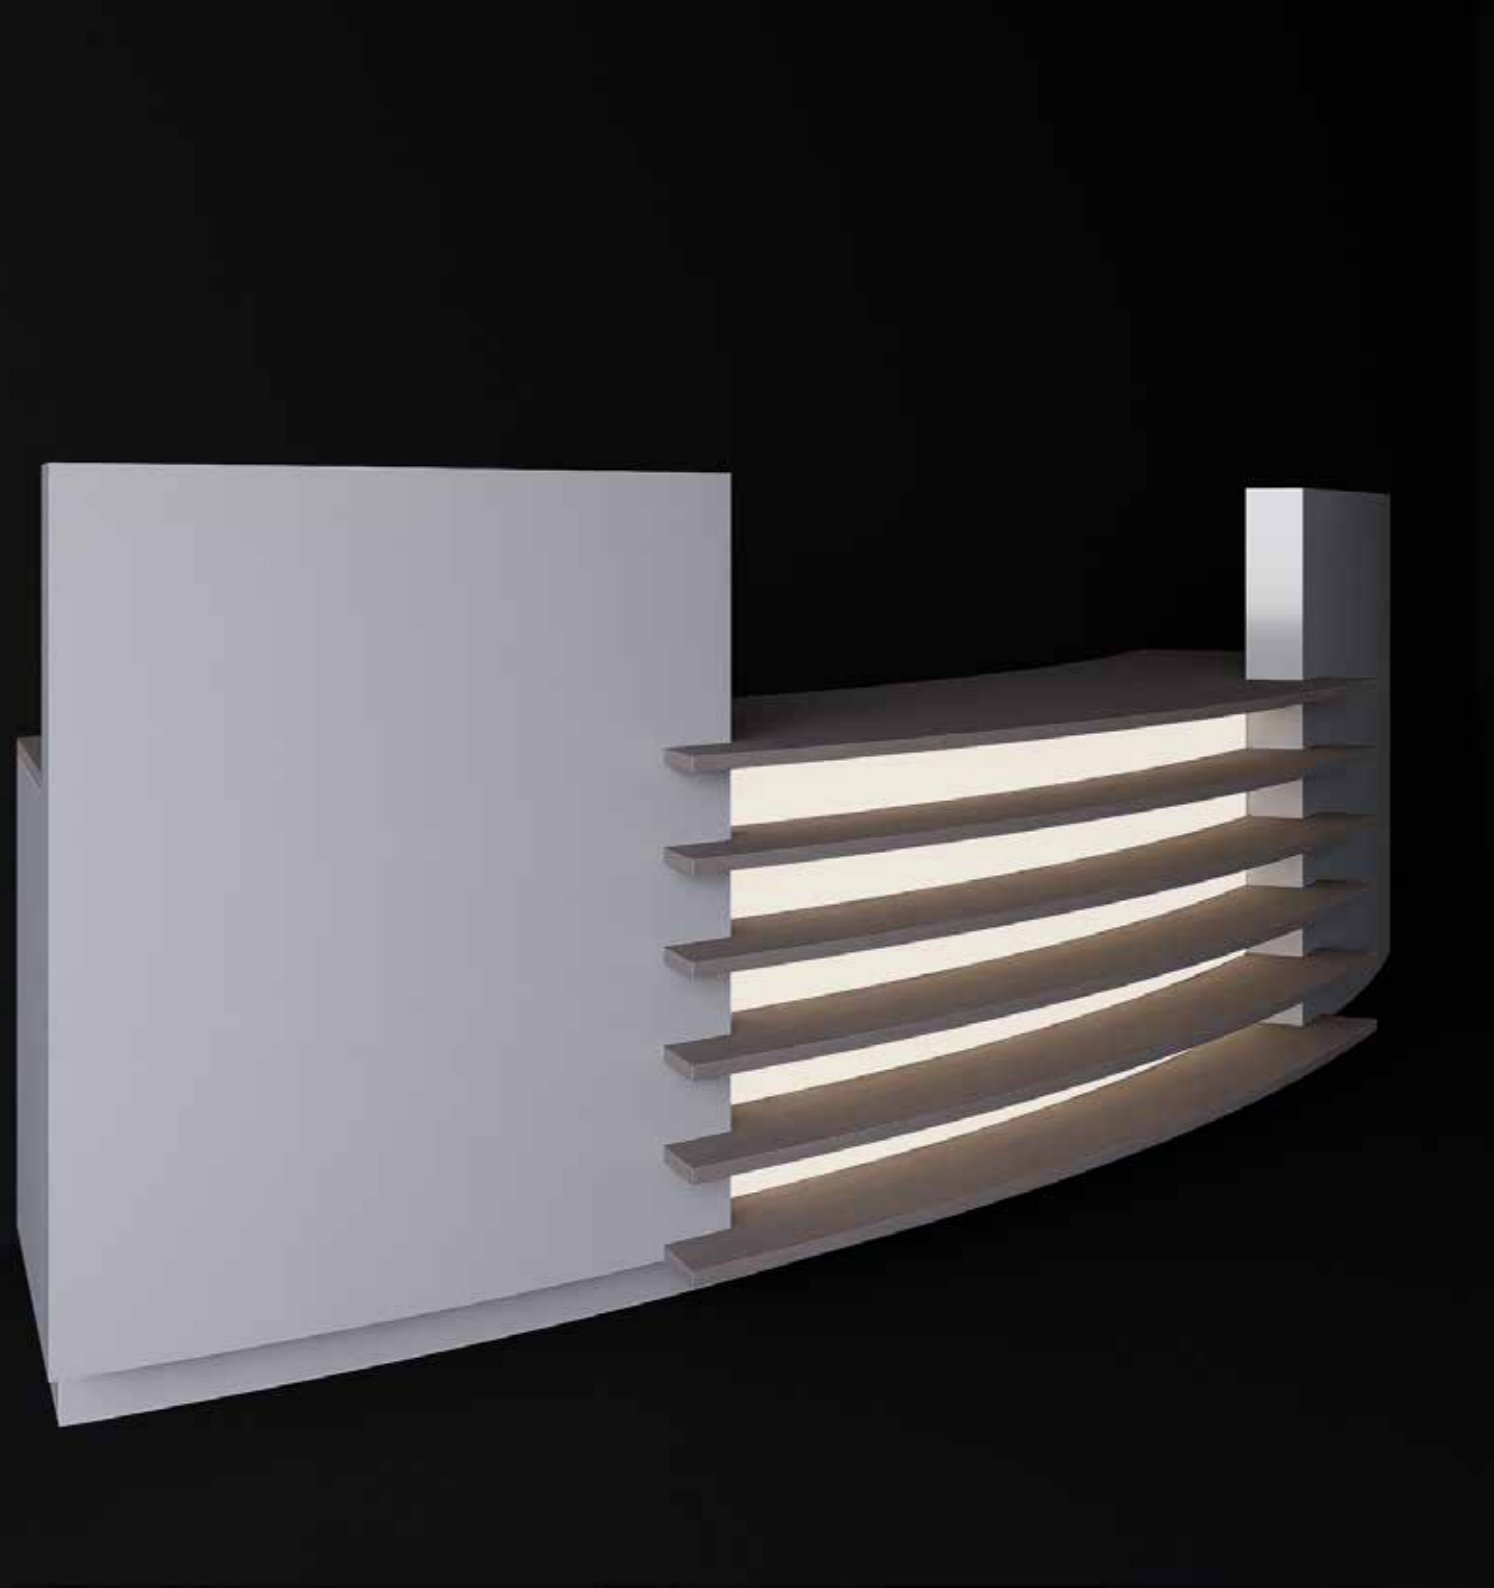

What is the purpose of art?

To make you more human, and that is necessary and urgent to help us live in fullness.
